

CHILL

# OUR STORY

# THIS IS US

Chilli Pro Scooter stands for absolute passion and 100% support for the stunt scooter sport. Founded in 2010, with the goal of developing a high-end stunt scooter line-up for all ages and skill levels, we now offer everything from kids' stunt scooters to professional models. According our motto «scooters for every skill level» we research, develop, test and design day in, day out in cooperation with our Chilli Pro and Flow riders to build the best stunt scooters for you. the best stunt scooters for you and our continuously growing community. To match our expanding audience, we've redefined our product range into clear chapters: **Base** (entry level), **Specialty** (specific styles like Pump Track), **Park**, **Street** and **CSG** (custom parts from our riders for those aiming higher).

# CHILLI RIDERS

# PUSHING LIMITS

At Chilli Pro Scooter, we believe that true progression begins where limits end. Our riders don't just compete – they inspire. From local freestyleparks to world stages, they embody what Chilli stands for: precision, creativity, and fearless energy. Chilli Pro Scooters continues to grow – in community, team riders, and brand awareness. At the European Championships in Norway 2025, Harvey Perkins and Neve Entwistle claimed Gold, showcasing world-class performance. Our riders not only shine at competitions but also break records – Tom Buxbaum, just 12 years old, set a world record with 20 Flairs! Our team is pushing boundaries daily, striving to become the best in the world. Every competition, every trick, every landing – it's a reflection of the dedication that drives our team. With passion forged in the park and performance built into every scooter, Chilli Pro Scooter continues to shape the future of freestyle riding worldwide.

**KEEP ON RIDING – TEAM CHILLI**

# STUNT SCOOTER DICTIONARY

## STREET SCOOTER

Street scooters are generally **larger, heavier and have a wider deck**. They are particularly suitable for riders who are often on the road and **grind on ledges or rails**. The long, wide deck offers more stability and space for the feet and the rectangular shape allows easier 50-50's and other street tricks.

VS

## PARK SCOOTER

Park scooters on the other hand have a **compact, light-weight deck** and a **shorter T-bar**. They are better suited for more complicated tricks in parks such as combinations of **whips and barspins or briflips**.

The chrome-molybdenum alloy is ideal for every rider level. This alloy is characterised by a very **high stability**.

For most riders, the steel bar is the best choice. It is very **robust, durable** and can even **withstand bad landings**.

The aluminium bar is very **light** and is therefore often used for children's scooters. Taller Riders should only use this T-bar if they have the necessary experience, as this bar can bend during a bad landing.

**Ultra-light** titanium bar with **maximum stability** for freestyle scooters. Offers perfect handling, high durability and optimal control for every trick. This bar can bend during a bad landing

## 100 MM vs 110 MM vs 120 MM WHEELS

Wheels with a diameter of 100 mm, 110 mm or 120 mm are usually used in stunt scooters. The **width is always 24 mm**, so that the wheels fit into all common forks. The **bigger** the wheels are, **the faster** they are, but this also affects the weight. Since we've noticed a different user behaviour, we also offer **Wheels up to 150 mm** within our Range, which are also slightly wider.

**Important:** The suitable wheel size depends on the fork and brake used, **not all wheels fit on all scooters.**

## ABEC 7 vs ABEC 9 BEARINGS

Ball bearings ensure that the wheels rotate smoothly. The running speed of ball bearings is given in ABEC. **The higher the number behind the unit, the higher the quality and faster the ball bearing.** For stunt scooters, a distinction is usually made between ABEC 7 and ABEC 9 ball bearings. Cheap stunt scooters often have only ABEC 5.

As a **premium brand**, Chilli uses **only ABEC 9** in all stunt scooters to ensure optimal riding characteristics.

## CHILLI COMPRESSION SYSTEMS

Chilli Scooters are equipped with either an **SCS or HIC compression system**. Compression systems connect the bar to the fork and deck. Stunt scooters use special compression systems to **withstand the high loads**. In addition, compression systems **minimize bar wobble** and thus enable easier barspins and tailwhips.

Even if some riders prefer one or the other system, they both **serve the same purpose**. So in the end it is a matter of taste which compression system you choose.

## SCS

With the SCS Compression System (Standard Compression System) the **clamp is placed on a fork** and inside the clamp the screw is **tightened from above**.

## SPIDER HIC/ HIC

HIC systems (Hidden internal Compression) are almost standard on Chilli Scooters. A HIC shim is **placed on a HIC fork** and a screw is **screwed in from above**.

The only difference between the classic HIC and a Chilli Spider HIC is that the **shim looks like a spider**, hence its name.
